

General Specifications

EJA210E Flange Mounted Differential Pressure Transmitter

GS 01C31C01-01EN

[Style: S2]

The high performance flange mounted differential pressure transmitter EJA210E can be used to measure levels of densities of solidifying or precipitating liquids. EJA210E outputs a 4 to 20 mA DC signal corresponding to the measured differential pressure. Its accurate and stable sensor can also measure the static pressure which can be shown on the integral indicator or remotely monitored via BRAIN or HART communications. Other key features include quick response, remote set-up using communications and self-diagnostics. FOUNDATION Fieldbus, PROFIBUS PA and 1 to 5 V DC with HART (Low Power) protocol types are also available. EJA-E series models in their standard configuration, with the exception of the Fieldbus, PROFIBUS and Low Power types, are certified as complying with SIL 2 for safety requirement.

■ MODEL AND SUFFIX CODES

● Instruction

The model and suffix codes for EJA210E consist of two parts; a transmitter body section (I) and a flange mounting section (II). This specification sheet introduces these two parts separately. The transmitter body section is shown in one table, and the flange mounting section specifications are listed according to the flange size and the process connection style. First select the model and suffix codes of transmitter body section and then continue on one of the flange mounting section.

*5: Not applicable for gasket contact surface code 1.

*6: Hastelloy C-276 or ASTM N10276

*7: ⚠ Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user's process fluids.

Be very careful with highly corrosive process fluids such as hydrochloric acid, sulfuric acid, hydrogen sulfide, sodium hypochlorite, and high-temperature steam (150°C [302°F] or above). Contact Yokogawa for detailed information of the wetted parts material.

*8: Forged version of the material may be used.

*9: Specify always with option code /K2 or /K6.

The '# marks indicate the construction materials conform to NACE material recommendations per MR0175/ISO15156.

Please refer to latest standards for details. Selected materials also conform to NACE MR0103.

< Ordering Information > “◇”

Specify the following when ordering

1. Model, suffix codes, and option codes
2. Calibration range and units:
 - 1) Calibration range can be specified with range value specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000. When reverse range is designated, specify LRV as greater than URV. When square root output mode is specified, LRV must be “0(zero)”.
 - 2) Specify only one unit from the table, ‘Factory setting.’
3. Display scale and units (for transmitters equipped with the integral indicator only)

Specify either 0 to 100 % or ‘Range and Unit’ for engineering units scale:
Scale range can be specified with range limit specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000. Unit display consists of 6-digit, therefore, if the specified scaling unit excluding ‘/’ is longer than 6-characters, the first 6 characters will be displayed on the unit display.
4. HART PROTOCOL

When output signal code is “J”, specify the HART protocol revision “5” or “7”.
5. TAG NO (if required)

Specified characters (up to 16 characters for BRAIN, 22 characters for HART, or 16 characters for /N4 tag) are engraved on the stainless steel tag plate fixed on the housing.
6. SOFTWARE TAG (for HART only, if required)

Specified characters (up to 32 characters) are set as “Tag” (the first 8 characters) and “Long tag”^{*1} (32 characters) in the amplifier memory. Use alphanumeric capital letters.
When the “SOFTWARE TAG” is not specified, specified “TAG NO” is set as “Tag” (the first 8 characters) and “Long tag”^{*1} (22 characters) in the amplifier memory.
^{*1}: applicable only when HART 7 is selected.
7. Other factory configurations (if required)

Specifying option code **CA** or **CB** will allow further configuration at factory. Following are configurable items and setting range.

[/CA : For HART communication type]

 - 1) Descriptor (up to 16 characters)
 - 2) Message (up to 30 characters)
 - 3) Software damping (0.00 to 100.00 s)

[/CB : For BRAIN communication type]

 - 1) Software damping (0.00 to 100.00 s)

< Factory Setting >

Tag number	As specified in order
Software damping ^{*1}	‘2.00 s’ or as specified in order
Calibration range lower range value	As specified in order
Calibration range upper range value	As specified in order
Calibration range units	Selected from mmH ₂ O, mmH ₂ O(68°F), mmAq ² , mmWG ² , mmHg, Pa, hPa ² , kPa, MPa, mbar, bar, gf/cm ² , kgf/cm ² , inH ₂ O, inH ₂ O(68°F), inHg, ftH ₂ O, ftH ₂ O(68°F) or psi. (Only one unit can be specified.)
Display setting	Designated differential pressure value specified in order. (% or user scaled value.)
Static pressure display range	‘0 to 25 MPa’ for M and H capsule, absolute value. Measuring low pressure side.

- *1: To specify these items at factory, option code **CA** or **CB** is required.
- *2: Not available for HART protocol type.
