- In case of 6 Bits input, 5 sound tones can be played. For Binary input, 30 sound tones can be played.
- STND100R, STND100LR, STND125R, STND125LR : Black output line is Negative(-)

Do not apply power into each signal line. Product may be damaged

- NPN transistor(non-external contact control) can be enabled by using the flashing common line for the light source.
- Each unit's light source and signal sound do not operate identically even though multiple units are working at the same time.
- Do not short-circuit between steady common and flash common. Signal light won't work properly.
